

# Aidan O'Neill

aidanconnoroneill.github.io • 206-769-0867 • aidanoneill3776@gmail.com • Chicago, IL

## EDUCATION

### University of Massachusetts, Amherst

Amherst, MA

MS in Computer Science (3.79)

May 2023

Coursework: Machine Learning, Algorithmic Fairness and Strategic Behavior, Algorithms for Data Science, Advanced Algorithms, Information Retrieval, Secure Distributed Systems, Neural Networks, Applied Numerical Optimization, Digital Forensic Systems

### Davidson College

Davidson, NC

Bachelor of Science, Political Science (3.73) and Computer Science (3.81) with Honors, Cum Laude

May 2020

Pertinent Coursework: Data Structures, Discrete Structures, Programming Languages, Networks and Systems, Computer Organization, Machine Reasoning, Distributed Data Structures, Database Systems, Analysis of Algorithms, Machine Learning, Linear and Discrete Optimization, Distributed Artificial Intelligence, Algorithmic Game Theory

## EXPERIENCE

### JPMorgan Chase | Software Engineer II | Chicago, IL

March 2023-Current

- Led a database migration for 10M records and hundreds of SPROC to Java, boosting accuracy from 50% to over 99%
- Deployed Prometheus and Grafana for real-time metrics, enabling sub-5-minute alerting for key performance indicators
  - Collaborated with product and technical leads to identify KPIs
- Partnered with QA engineers to effectively triage issues in lower environments, with most resolved within the same day
- Mentored team members on new codebases and processes, allowing the team to have a greater impact across Chase
- Supervised production releases outside of business hours to minimize customer impact, carefully checking for errors, exceptions and anomalies to ensure smooth deployments
- Acted as the primary point of contact for all data streaming platform customers, coordinating efforts across 12 teams and 50 people. Ensured technical requirements were captured and communicated the specifications for new features to the development team. Debugged customer pipelines using Gaia Kafka, Amazon S3, Amazon Athena and Kubernetes to facilitate their timely delivery to production
- Create Hugo websites to maintain documentation targeted to executives, customers, developers and support personnel

### Apple | Software Engineering Intern | Cupertino, CA

June 2022-September 2022

- Improved a regression testing system for machine learning tagger models used by the News App, decreasing the runtime for regression testing by a factor of 12x and eliminating pain points for model scientists
- Consolidated 5 PySpark jobs into 2 jobs and eliminated a daily Java cron improving run-time and reducing brittle inter-job dependencies by eliminating approx. 750,000 intermediate directories and files
- Identified a bug in the taggers due to a lack of robustness to different encodings while validating the new system
- Used PySpark, Hadoop, Kube, YAML, Rio and Artifactory; focused on efficient, reusable, and testable code

### Amazon | Data Science Intern | Seattle, WA

May 2021-August 2021

- Developed a summarization backend which creates TLDRs for tax documents, saving Amazon approx. \$1M per annum
- Used AWS Lambda, API Gateway, RDS, and S3 for an efficient, cheap, and easy-to-maintain backend
- Collaborated with Amazon Tax specialists to understand how Amazon Tax previously generated TLDRs as well as to evaluate how useful state-of-the-art summarization techniques as compared to heuristic approaches would be to Amazon
- Created a website using React and following RESTful principles which allows non-developers to adapt the summarization algorithm, allowing Amazon Tax to easily improve and extend the summarization backend resources

### Test Innovators | Machine Learning Consultant | Seattle, WA

November 2020 – March 2023

- Built on deep learning literature on autoencoder architectures in NLP to automate essay grading
- Analyzed various interventions to assess their impact on students, informing business strategies and sales efforts
- Used NLTK, Tensorflow, Seaborn, Scikit-Learn, Pandas and Numpy on Google Colab

### University of Massachusetts | Teaching Assistant | Amherst, MA

Fall 2020 – May 2023

- Lead office hours and create materials for Secure Distributed Systems, Systems for Data Science, and Data Structures

## Research

- Developed a multi-threaded library that facilitates high-performance computation across nodes using Message Passing Interface, atomic operations, allowing researchers to pass anonymous functions using RDMA between compute nodes
- Implemented an efficient, distributed agent that uses Monte Carlo Tree Search (MCTS) to find optimal moves in Hex
  - Distributed MCTS using per-thread work queues on compute nodes scheduled by one controller node
- Presentation at MathFest 2018 entitled *On Error Free Transformations and Applications to Polynomial Equations*

## SKILLS

- Proficient in C++, Python, C, Java, and MYSQL; Experience with PromQL, Mathematica, R, JavaScript, SML, Mathematica, Rust, HTML, and CSS
- AWS Certified Solutions Architect Associate
- Hobbies include rock climbing, Ultimate Frisbee, piano, and beekeeping
